

Release Note **2025.08**

GENERAL

I.	Profile management – administrator overview	4
II.	Adjustment of security standard for password policy	7
III.	Extension of XML transaction data Export	8
IV.	Hiding the login screen when using SSO	9
V.	Standard reports with travel end date	10
VI.	Display of issuing country for passport in profile	11

RAIL

I.	Deutschland-Ticket in the traveller profile for the DB Partner Interface (PST)	12
II.	bahn.business - SBB (Swiss Federal Railways) can now be booked as a one-way ticket	16
III.	Removal of temporary BahnCard from traveler profile	19
IV.	Limitation to one traveller per booking	20
V.	Adding additional travellers without profile selection	21
VI.	DB Partner Interface (PST) and ÖBB: Seat reservation only	22

FLIGHT

I.	Kyte – new airline: Jet2	24
II.	Price limit for seat booking - Setting to travel policy Group	25

HOTEL

I.	CRC - Cost coverage documents available in onesto	26
II.	HRS Payment Process - Transfer of email address	27
III.	Hotel blacklist by hotel chains	28

RENTAL CAR

I.	Display of the Sixt Ride vehicle category	29
II.	Sixt online check-In for corporate customers	30
III.	Rental Car – custom traffic light Color	31
IV.	Enterprise – Booking with AirPlus payment now possible in additional countries	32

ROADMAP

I.	Advance notices	33
----	-----------------------	----

I. Profile management – administrator overview (1/3)

Administration The setting is automatic and cannot be set administratively.

ID 14320 

For users with the "Show company profile data" permission, this release expands the profile management functionality to include the ability to search for users with administrative privileges.

[Manage companies](#) > Manage profiles

Please enter the parameters for your search. If you do not enter any parameters, you get all users.

II. Adjustment of security standard for password policy

Administration The setting is automatic and cannot be set administratively.

ID 15090

To further enhance the system's security standards and meet current PCI DSS requirements, the following changes will take effect with this release:

- If a password is not used for 90 days, it will be removed from the profile. Logging in will then only be possible by requesting a password reset link, which will be sent to the registered email address. Once a new password that meets the minimum requirements is set, login will be possible again.
- After a password is changed, all sessions including the current session will be terminated.
- The new default policy requires passwords to be at least 12 characters long and include at least one digit. Additionally, the last 4 used passwords cannot be reused for at least 12 months.
Alignment of Custom Settings: Any custom client settings will be elevated to match the current security level.
- A notification email about upcoming password deactivation will be sent 10 days in advance.

If no password has ever been set for a profile (e.g., because login is handled via SSO), this process does not apply.

III. Extension of XML transaction data export

Administration To use this function, please get in touch with your onesto contact.

ID 14617 

The onesto transaction data export in XML format has been enhanced to include information on the threshold value of the booked flight or hotel service within the travel policy.

While the booked price has already been part of the export file, the respective threshold value which triggered a yellow or red traffic light status can now also be extracted for further internal processing.

Additionally, any justification entered during the booking process (if required) can now be evaluated as part of the transaction data export.

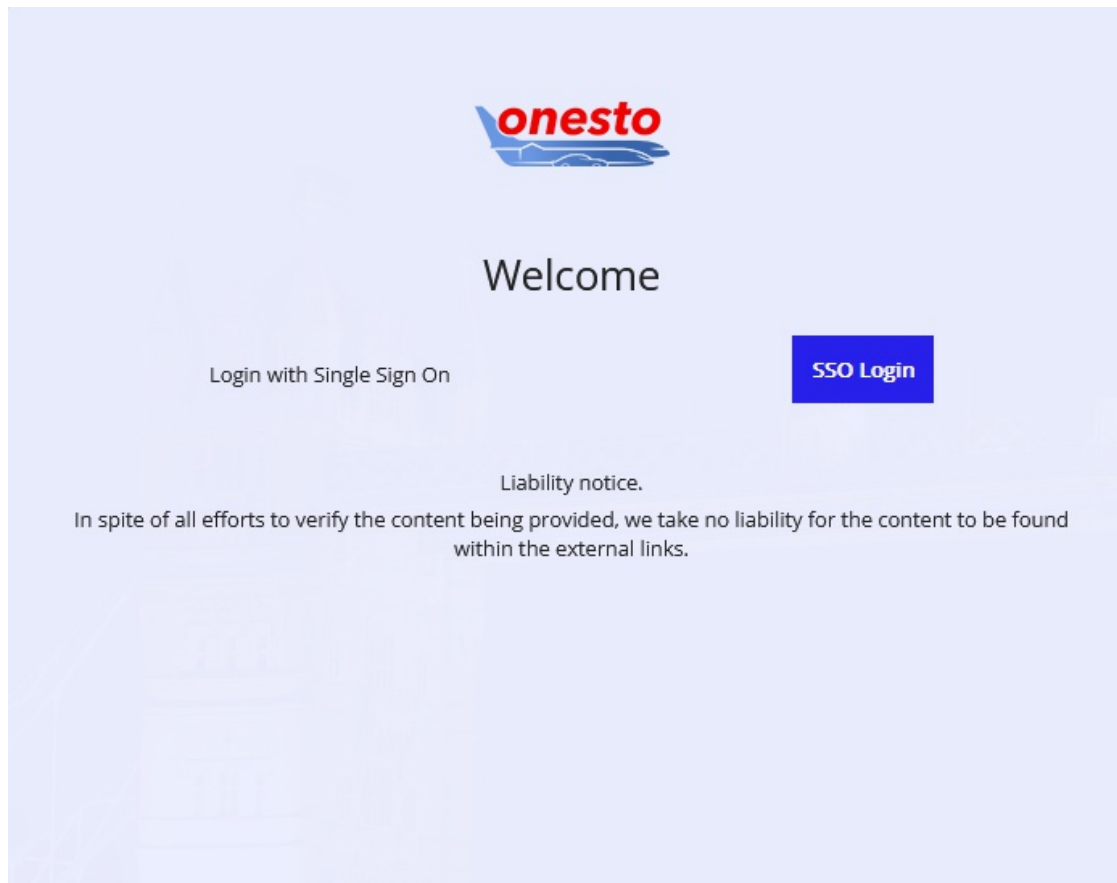

IV. Hiding the login screen when using SSO

Administration To use this function, please get in touch with your onesto contact.

ID 15181 

For customers who have configured Single Sign-On (SSO), it is now possible to activate SSO as the only authentication method. In this case, the username and password fields on the login page will no longer be displayed. Likewise, options to reset or change the password will be removed.

This change does not affect the login process for onesto2go.

V. Standard reports with travel end date

Administration The setting is automatic and cannot be set administratively.

ID 14838 

The standard reports offered in the system (Flight, Train, Rental Car, Hotel, and Overall by Booking or Travel Date) will now include an additional column titled "End date of Travel," alongside the existing booking and departure dates.

VI. Display of issuing country for passport in profile

Administration The setting is automatic and cannot be set administratively.

ID 15353

Within profile management, in the "Official Documents" section, the issuing country will now be displayed in addition to the labels "Passport" or "Identity Card." This enhancement provides better differentiation, especially for employees with dual citizenship. If the issuing country is "Germany," the familiar symbol remains; for other countries, the respective country flag will be shown.

I. Deutschland-Ticket in the traveller profile for the DB Partner Interface (PST) (1/4)

Administration The setting is automatic and cannot be set administratively.

ID 13989

The Deutschland-Ticket can now be stored in the profile for travellers and will only apply when using the DB partner interface (PST).

It can be selected whether the Deutschland-Ticket should always be considered.

In this case, the Deutschland-Ticket will be automatically applied to every DB booking when using the DB partner interface (PST).

☒ Consider German Deutschland-Ticket

The Deutschland-Ticket will be considered during the price query, and no fare will be charged for the regional transport portion of the journey.

However, the Deutschland-Ticket must be carried on the relevant trains for the trip!

I. Deutschland-Ticket in the traveller profile for the DB Partner Interface (PST) (3/4)

Administration The setting is automatic and cannot be set administratively.

ID 13989

During the booking process, on the onesto travel plan, and on the DB ticket itself, a reminder text and a mouseover message will indicate the need for an additional ticket.

The screenshot shows a travel plan for a journey from Aichach to Herrenberg on Wednesday, 17.09.2025. The journey consists of several segments: Aichach to Augsburg Hbf (ICE 612), Augsburg Hbf to Stuttgart Hbf (ICE 612), Stuttgart Hbf to Stuttgart Hbf (S 1), Stuttgart Hbf to Herrenberg (S 1), and Herrenberg to Stuttgart Hbf (S 1). A red box highlights a warning message: "The ticket is not valid for one section of the journey. In this case another ticket is required!".

The screenshot shows a sample DB ticket (Muster-Ticket) for a journey from Augsburg to Stuttgart. The ticket includes a QR code, the DB logo, and the text "Muster-Ticket". A red box highlights a warning message: "Die Fahrkarte ist für diesen Abschnitt nicht gültig. Hier ist eine weitere Fahrkarte erforderlich.".

I. Deutschland-Ticket in the traveller profile for the DB Partner Interface (PST) (4/4)

Administration The setting is automatic and cannot be set administratively.

ID 13989

Please also note the regulations of Deutsche Bahn regarding the transport contract and passenger rights:

"When combining both tickets, journeys in regional transport using the Deutschland-Ticket and long-distance travel using the long-distance ticket are each considered separate transport contracts. The right to continuous passenger rights between regional and long-distance transport does not apply.

For example, if a regional train is delayed and the connection to a long-distance train is missed, the train binding will not be lifted, and travel on a later train with a ticket that has a train binding (e.g. saver fares) is not possible. Any passenger rights compensation claims will also be considered separately for the respective long-distance ticket or the Deutschland-Ticket."

Travel in First Class:

The Deutschland-Ticket is only valid for travel in the 2nd class.

If the Deutschland-Ticket is used for first-class travel, the affected regional sections must be travelled in the 2nd class.

If regional trains are also used in first class, a first-class ticket for the entire route must be purchased without considering the Deutschland-Ticket.

II. bahn.business - SBB (Swiss Federal Railways) can now be booked as a one-way ticket (1/3)

Administration The setting is automatic and cannot be set administratively.

ID 15401

It is now possible to book tickets for the Swiss Federal Railways (SBB) via the bahn.business interface. Both domestic train routes within Switzerland and cross-border routes can be booked.

The query is performed from onesto, with a transition to bahn.business.

- Currently, only one-way tickets for SBB can be booked through bahn.business.
- If a round-trip is queried, bahn.business cannot calculate the fare.
- To book a round-trip, both the outbound and return journeys must be booked separately.
- An extension for round-trip tickets is planned for early 2026.

The screenshot shows the bahn.business booking interface. At the top, there are icons for different transport modes: a plane, a train (selected), a hotel, a car, a mobile phone, and a menu. Below the icons, the word "Rail" is displayed. The main form contains the following fields:

- Round trip / One-way:** Two radio buttons. "Round trip" is crossed out with a red line, and "One-way" is selected and highlighted with a red box.
- Origin:** A text input field containing "Chiasso".
- Destination:** A text input field containing "ZÜRICH".
- Departure date:** A date picker showing "Wed, 16.07.2025".
- Departure time:** Two dropdown menus showing "07" and "00", followed by a "Departure" label and a dropdown arrow.
- Type of ticket:** A dropdown menu showing "One trip".
- Direct connections only:** A checkbox that is currently unchecked.
- Class:** A dropdown menu showing "2nd class".
- BahnCard:** A dropdown menu showing "No BahnCard available".

II. bahn.business - SBB (Swiss Federal Railways) can now be booked as a one-way ticket (2/3)

Administration The setting is automatic and cannot be set administratively.

ID 15401

- The billing is done in the same way as for a DB booking (e.g. to the company account card).
- The VAT is displayed on the SBB ticket and is not available through AirPlus.
- The ticket is sent as a PDF via email by DB and can also be retrieved from DB using the order number.

II. bahn.business - SBB (Swiss Federal Railways) can now be booked as a one-way ticket (3/3)

Administration The setting is automatic and cannot be set administratively.

ID 15401 

- When booking, the age of the travellers is queried on the DB page.
- This must match the date of birth.
- The booking of SBB tickets cannot be disabled or administrated through onesto.
- Booking is only possible via bahn.business, not via the DB partner interface (PST).
- Corporate discounts negotiated with SBB do not apply when booking SBB tickets through bahn.business. Only public fares can be booked. Discount cards, such as the Halbtax subscription, will be taken into account.

III. Removal of temporary BahnCard from traveler profile

Administration The setting is automatic and cannot be set administratively.

ID 14844

The Deutsche Bahn (DB) no longer issues a "temporary BahnCard". Both through DB interfaces and at travel agencies or DB travel centers, the BahnCard number is now provided directly.

As a result, we have removed the option to store a "temporary BahnCard" in the profile.

☐ preliminary Bahncard

IV. Limitation to one traveller per booking

Administration To use this function, please get in touch with your onesto contact.

ID 15145 

Until now, it was possible to add additional travellers to a train booking through the profile selection.

With this development, this option can now be turned off, so that no additional travellers can be added to train bookings.

This option is effective for all integrated train interfaces (DB partner interface (PST), ÖBB, benerail, trainline, České drahy), but not for DB bahn.business, as additional travellers are added directly on the DB website.

V. Adding additional travellers without profile selection

Administration The setting is automatic and cannot be set administratively.

ID 14928

Depending on the settings and provider, it is possible to book for multiple travellers at once in the train section.

Now, it is also possible to book for additional travellers who do not have an onesto profile or for whom no booking authorization exists.

The screenshot shows the onesto RAIL booking interface. A modal titled "Select traveller" is open, displaying a search bar labeled "Find traveller" and a "Cancel" button. In the background, the booking form is visible, showing fields for "Origin", "Destination", "Return stopover", "Date" (Fri, 11.07.2025), "Time" (17:00), "Class" (2nd class), "Birth" (12/12/1980), and "No BahnCard available". A button labeled "more travellers" is highlighted with a red box in the bottom right corner of the booking form.

When several people are involved in a transaction, billing is always carried out via the person for whom the transaction was created.

VI. DB Partner Interface (PST) and ÖBB: Seat reservation only (1/2)

Administration The setting is automatic and cannot be set administratively.

ID 14540

With this release, we simplify the booking of seat reservations without a ticket and offer this option directly on the homepage.

The screenshot shows the 'Rail' section of the onesto booking interface. At the top, there are icons for Airplane, Rail, Hotel, Car, Mobile phone, and Document. Below these, the 'Rail' section is active. The 'Seat Reservation Only' option is selected and highlighted with a red box. The form includes fields for Origin, Destination, Stopover, Departure date (Fri, 25.07.2025), Departure time (07:00), Train type (Standard search), Direct connections only (checkbox), and Class (2nd class).

Currently, Deutsche Bahn offers seat reservations without a ticket only for one direction of travel. If a seat reservation is to be made for both the outbound and return journey, it must be booked separately for each direction.

First, book the seat reservation for the outbound journey, and after completion (which is also possible within the same onesto trip), book the reservation for the return journey.

VI. DB Partner Interface (PST) and ÖBB: Seat reservation only (2/2)

Administration The setting is automatic and cannot be set administratively.

ID 14540

The screenshot displays the onesto app interface for a train reservation. At the top, there's a blue header with the 'Rail' icon and 'Change search' button. Below this, the search criteria are shown: 'München Hbf' to 'Stuttgart Hbf' on 'Wed, 24.09.2025' at '07:00'. A breadcrumb trail indicates the current step is 'Results'. The main content area shows a train card for 'ICE 612 (DB Fernverkehr AG)' on 'Wed, 24.09.2025' from '07:27 München Hbf' to '09:45 Stuttgart Hbf'. The platform is '18'. Below the train card, a blue bar indicates '2nd class from 5.50 €'. At the bottom, a black bar contains the text 'Rebookable', 'Cancellable', 'Fare', and 'Total price'. A red box highlights the '5.50 €' price and the 'Select' button. The bottom navigation bar includes a 'Sitzplatzreservierung' button and a 'Select' button.

This feature is only active when using the DB partner interface (PST) or ÖBB, and is not offered by other providers or in a combined query of different providers.

I. Kyte – new airline: Jet2

Administration To use this function, please get in touch with your onesto contact.

ID 15060

The 'Kyte' interface, after last year's introduction with Ryanair, will now be expanded in the next step to include another low-cost airline: Jet2.

	10:00 – 11:15	20.12.2025	SZG ▶ BHX	02:15 h

▶

09:10 Salzburg | SZG

CO₂ 478 kg

Jet2 is a British low-cost airline that serves the airports of Berlin and Cologne in Germany. In Austria, it operates flights to Vienna, Salzburg, and Innsbruck, and in Switzerland, it flies to Geneva.

II. Price limit for seat booking - Setting to travel policy group

Administration To use this function, please get in touch with your onesto contact.

ID 14755 

With our release in February 2025, we introduced the ability to set a price limit for paid seat bookings on a company level for flights.

We have expanded this feature so that now, price limits can also be managed at the Travel Policy Group level.

I. CRC - Cost coverage documents available in onesto

Administration To use this function, please get in touch with your CRC contact.

ID 15188

CRC has introduced a new feature that allows cost coverage documents to be stored directly in the onesto travel process, making them available to the traveller during the trip, for example, through the 'onesto2go' app.

Below is the wording from CRC regarding this new feature:

Cost coverage documents now directly available in onesto

We are constantly developing our features and would like to inform you today that there is a new update in connection with the use of CRC through onesto.

Central billing via AirPlus is one of the most important services we offer. The handling of cost coverage plays a significant role in this process.

We are now able to provide the cost coverage document, which we communicate to the hotel, directly in onesto for you. Of course, it is still possible to send the document via email to the email address stored in the booking.

With this new feature, the additional email can be omitted, and the traveller will receive the cost coverage document as a PDF along with their travel plan, which can also be accessed through their travel plan.

If you are interested in this feature, please contact your personal representative at CRC.

II. HRS Payment Process - Transfer of email address

Administration To use this function, please get in touch with your onesto contact.

ID 15103 

When using the HRS billing process (e.g., HRS Invisible Pay), it can now be specified whether the notification from HRS should be sent to the booker, traveller, or a fixed central email address.

This allows, for example, cost coverage documents to be sent to the appropriate recipient.

III. Hotel blacklist by hotel chains

Administration To use this function, please get in touch with your onesto contact.

ID 14372 

In addition to the previous options (filtering by specific hotel name or individual hotel ID of the used hotel provider), the chain name can now also be specified, so that each individual property of the chain does not have to be added to the blacklist separately.

This significantly simplifies the maintenance of unwanted hotels.

I. Display of the Sixt Ride vehicle category

Administration The setting is automatic and cannot be set administratively.

ID 14724

In addition to the well-known sorting by car rental categories, such as Compact, Upper Mid-Range, etc., the Sixt Ride-specific categories, such as Ride, Ride XL, are now also displayed.

With the Sixt Online Check-In, travellers can save their driver's license information and thus reduce waiting time and rental formalities at the counter.

III. Rental Car – custom traffic light color

Administration To use this function, please get in touch with your onesto contact.

ID 15131

With this release, it is now possible to configure the traffic light colour for vehicles independently of the vehicle category, based on the provider.

As shown in the example below, electric vehicles can generally be displayed with a green traffic light, even if the associated vehicle category would normally have a different colour assigned.

IV. Enterprise – Booking with AirPlus payment now possible in additional countries

Administration The setting is automatic and cannot be set administratively.

ID 14764 

With this release, it is now possible to book Enterprise rental cars with AirPlus payment in the following countries as well:

- Argentina
- Brazil
- Chile
- Colombia
- Egypt
- Mexico
- New Zealand
- Saudi Arabia
- South Africa
- United Arab Emirates

I. Advance notices

New Development: onesto2go for iOS and Android

The new onesto2go app is being developed as a native application with a completely new and intuitive design for both iOS and Android. The app offers higher speed and a new user experience, powered by the new onesto API.

trainline

UK Rail and SBB are already available; additional providers can be integrated upon request. Simplified registration and payment process.

benerail

Expanded to include PKP (Poland).

Kyte

Expanded to include other providers (low-cost airlines and NDC content, e.g., British Airways NDC).

Amadeus NDC (X)

Expansion to other providers (e.g., SAS, LOT, LH Group).

New Car Rental Provider: Starcar

New Sustainability Solution

The new sustainability solution in onesto will allow for the management and analysis of CO₂ emissions across all modes of travel.

Calculated CO₂ values will be displayed before booking and can also be used as a sorting criterion in the results list.

onesto will offer both Basic and Premium products with this sustainability solution, allowing companies to meet a wide range of requirements on the topic of CO₂ (including compensation).

Also in planning:

- Integration of additional administrative areas into the new layout
- Further accessibility improvements
- onesto API for booking from third-party systems
- AI features
- Enhancements to the dashboard
