| I.   | DB Partner Interface (PST) – Fares including reservation .....           | 19 |
| II.  | DB Partner Interface (PST) – Display of train-specific Information ..... | 21 |
| III. | Translation of station names for DB interfaces .....                     | 22 |
| IV.  | UK Entry Information for Train Travel .....                              | 23 |

## FLIGHT

|     |                                     |    |
|-----|-------------------------------------|----|
| I.  | India entry Information .....       | 24 |
| II. | Updated US entry requirements ..... | 25 |

## HOTEL

|      |                                                                  |    |
|------|------------------------------------------------------------------|----|
| I.   | Hotel filter Apartment .....                                     | 26 |
| II.  | Hotel sustainability information (ehotel) .....                  | 27 |
| III. | Transfer of search input into an existing order .....            | 28 |
| IV.  | Synchronization of ehôtel rebookings into the onesto order ..... | 30 |

**RENTAL CAR**

|      |                                                     |    |
|------|-----------------------------------------------------|----|
| I.   | Display of company logo .....                       | 31 |
| II.  | Order via travel agency .....                       | 32 |
| III. | Carpool – Pickup/return outside opening Hours ..... | 33 |

**ONESTO2GO**

|    |                                                                        |    |
|----|------------------------------------------------------------------------|----|
| I. | Display of attachments from notification management in onesto2go ..... | 34 |
|----|------------------------------------------------------------------------|----|

**ROADMAP**

|    |                       |    |
|----|-----------------------|----|
| I. | Advance notices ..... | 35 |
|----|-----------------------|----|

## I. SQUAKE x onesto - new CO<sub>2</sub> sustainability solution (1/5)

Administration The setting is done automatically.

ID 14398 

In cooperation with the Berlin-based climate tech startup SQUAKE, we are expanding our product portfolio with a powerful solution for more sustainable business travel, available from the upcoming release.

Through the free basic integration of SQUAKE into onesto, the CO<sub>2</sub> emissions generated by your business trips are now comprehensively calculated for all modes of transport using precise calculation methods and transparently displayed throughout the booking process and in reporting.

In future releases, new premium features will be developed within this integration to seamlessly combine sustainability and business travel in onesto — enabling targeted CO<sub>2</sub> reduction and climate-friendly travel compensation. Planned enhancements include extensions to the travel policy based on defined sustainability criteria, a redesigned dashboard, a certified audit mode, new reports, and various options for offsetting your CO<sub>2</sub> emissions.

Our new sustainability solution combines technology and processes into a holistic system that operates quickly, securely, and smoothly. No plug-ins or additional installations are required for onesto users.

The SQUAKE basic integration in onesto will be available to all users immediately after release. It integrates seamlessly into daily workflows, optimizes processes, and provides reliable CO<sub>2</sub> data at any time.

From the upcoming release, precisely calculated CO<sub>2</sub> values will be available for each mode of transport. The existing CO<sub>2</sub> display in the result lists will be expanded and optimized for every travel type. In addition, the calculated CO<sub>2</sub> emissions will be added as a new sorting criterion.

The calculation methods used can be configured and adapted to meet your specific sustainability requirements. The following calculation methods for each mode of transport are available in the basic integration, with additional methods implementable upon request.

# SQUAKE

## I. SQUAKE x onesto - new CO<sub>2</sub> sustainability solution (2/5)

Administration The setting is done automatically.

## I. SQUAKE x onesto - new CO<sub>2</sub> sustainability solution (4/5)

Administration The setting is done automatically.

ID 14398

### Overview of Available Calculation Methods

#### TIM

The Travel Impact Model (TIM), developed under the auspices of Google and its independent advisory committee, is revolutionizing the calculation of CO<sub>2</sub> footprints in air travel through a modern and holistic methodology. Based on public and licensable datasets, TIM precisely calculates CO<sub>2</sub> emissions per seat or per passenger, taking into account a wide range of variables — including flight details, aircraft types, and load factors. This results in a robust and transparent emissions assessment.

#### DEFRA

The Department for Environment, Food & Rural Affairs (DEFRA) of the United Kingdom has been a cornerstone of environmental policy for many years and plays a key role in developing methodologies across various sectors. It provides essential conversion factors and guidelines for calculating greenhouse gas (GHG) emissions in different sectors — such as air travel, rail, hotel, and car rental — with a strong focus on transparency and consistency.

#### ICAO

The International Civil Aviation Organization (ICAO) plays a central role in shaping aviation-related environmental policies on a global level. Recognizing the significant CO<sub>2</sub> footprint of the aviation industry, ICAO has developed methodologies specifically for the passenger flight sector to assess its environmental impact.

#### SQUAKE

The SQUAKE calculation method has been established as a refined, operator-centric approach to calculating CO<sub>2</sub> emissions in the rail travel sector. It acknowledges the complexity and differences between various rail operators and therefore emphasizes the use of operator-specific data rather than general averages.

## I. SQUAKE x onesto - new CO<sub>2</sub> sustainability solution (5/5)

Administration The setting is done automatically.

ID 14398 

### Base Empreinte (ADEME)

Base Empreinte, managed by ADEME (the French Agency for Ecological Transition), is a comprehensive environmental impact database that consolidates data from Base Carbone and Base IMPACTS. It supports environmental assessments by providing multi-criteria data — including greenhouse gas (GHG) emissions and other ecological impacts.

### Green View

The GreenView Hotel Footprinting Tool (HFT) is a robust, industry-recognized dataset that provides CO<sub>2</sub> footprint coefficients for hotel stays and meeting spaces worldwide. It is based on data from the Cornell Hotel Sustainability Benchmarking Index (CHSB), offering greater detail and more up-to-date metrics.

### ACRIS

ACRIS (Association of Car Rental Industry Systems Standards) is well known for its coding standards in the car rental sector and increasingly for its methodologies assessing the environmental impact of automotive travel.

## II. Hotel travel preferences in the traveller profile

**Administration** The setting is done automatically and cannot be set administratively.

ID 15012

From now on, hotel search preferences can be saved directly in the traveller profile.  
The following travel preferences can be stored in the profile:

- Breakfast included
- Breakfast excluded
- Accessible (barrier-free)
- Wi-Fi
- Parking
- Charging station for electric cars
- Restaurant

The saved travel preferences are automatically preselected as filters in the hotel search but can be adjusted at any time during the search process.

The screenshot shows the 'Hotel preferences' section of a user profile. At the top, there's a navigation bar with 'Support', 'Requests & Forms', 'Contact', and a user profile for 'Builder, Tom'. Below this, the 'Hotel preferences' form is displayed. It includes a 'Non-smoking/Smoking' dropdown menu, a 'Freetext' input field, and a list of checkboxes for various preferences: 'Breakfast incl', 'Breakfast not included', 'Accessible', 'WiFi', 'Parking', 'Charging station for electric vehicle', and 'Restaurant'. A 'Save' button is located at the bottom right of the form.

### III. Dashboard company filter

Administration The setting is done automatically and cannot be set administratively.

ID 14640

With this release, it is now possible to make multiple company selections in the dashboard — just as in our reports — in order to display and compare aggregated data for these companies.

## IV. Message on the search page (flight, rail, hotel, rental car, taxi) (1/3)

**Administration** The setting is done automatically and cannot be set administratively.

ID 11720 ⚙️

The existing feature for adding messages on the search page for a specific mode of travel can now be conveniently managed via the Company Administration.

Users with Travel Management rights will see a new tile called "Text-Manager."

Here, notice texts can be entered and saved in a manner similar to a word processor:

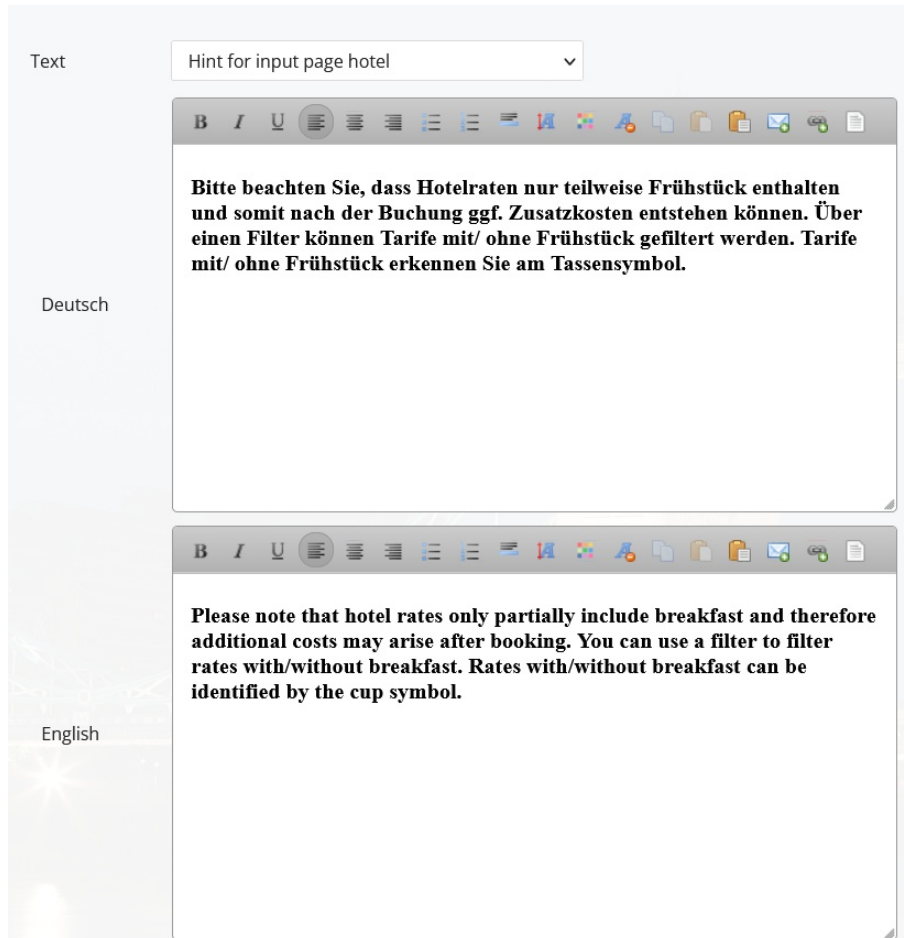

#### IV. Message on the search page (flight, rail, hotel, rental car, taxi) (2/3)

**Administration** The setting is done automatically and cannot be set administratively.

ID 11720 

Text example for hotel search page:

The following options are available:

- Numbered lists and bullet points
- Font colour and size
- Left-aligned, right-aligned, or centred text
- Divider lines
- Copy/Paste
- Linking to URLs and email addresses
- Display of the generated HTML format

#### IV. Message on the search page (flight, rail, hotel, rental car, taxi) (3/3)

Administration The setting is done automatically and cannot be set administratively.

ID 11720 ⚙️

The texts are displayed on the search page:

## V. Customer cards and documents display

Administration The setting is done automatically and cannot be set administratively.

ID 12982 ⚙️

We've improved the management of customer cards and documents.

From now on, if a card requires attention due to its expiration date, a clear notification will appear next to the traveller's name, making it easier to stay on top of important updates.

In the card overview, this information is also displayed within each card category. Additionally, the overview now shows the number of cards recorded in each category.

When a booking is made on behalf of another traveller, a warning will appear next to the traveller's profile picture.

## VI. Manual setup of profiles

**Administration** The setting is done automatically and cannot be set administratively.

ID 15135 

Previously, when a new user profile was manually created by another user, the profile had to be searched for and opened before any further edits could be made.

With this update, after creating a new profile, the user now remains directly in the newly created profile, allowing additional information to be entered and saved immediately.

## VII. Extension of the standard reports to include the provider Park.Aero

**Administration** The setting is done automatically and cannot be set administratively.

ID 15233 

With this release, we are including bookings made via Park.Aero in our standard reports.

Parking bookings are additionally incorporated into the reports “Booking Overview all by Booking Date” and “Booking Overview by all Travel Date.”

In addition, we are extending the standard reports with the statistics “Booking Parking at the airport By Booking date” and “Booking Parking at the airport By Travel Date.”

## VIII. Extension of the UserTravellerUpdater download file

**Administration** The setting is done automatically and cannot be set administratively.

ID 15235

From now on, the UserTravellerUpdater download file also includes the travel policy group of the traveller profile

|                   |   |
|-------------------|---|
| TravelPolicyGroup | S |
| PolicyGroup1      |   |
| PolicyGroup2      |   |

## IX. Fix employee number for Guest profiles in reporting

**Administration** To use this function, please get in touch with your onesto contact.

ID 14872 

With this release, for guest bookings, a fixed value — such as “9999999” or “GUEST” — can now be transmitted to the travel document instead of an employee number.

## I. DB Partner Interface (PST) – Fares including reservation (1/2)

Administration The setting is done automatically and cannot be set administratively.

ID 14821

For fares that include a free seat reservation (e.g., Flexfare Business), this information is now displayed in the fare overview.

| 2nd class from 14.99 € |            |             | 1st class from 27.99 €                   |             |
|------------------------|------------|-------------|------------------------------------------|-------------|
|                        | Rebookable | Cancellable | Fare                                     | Total price |
|                        | ✗          | ✗           | <a href="#">Super Sparpreis Aktion</a>   | 14.99 €<br> |
|                        | ✗          | 10.00 €     | <a href="#">Sparpreis Business</a>       | 29.99 €<br> |
|                        | ✗          | ✓           | <a href="#">Flexpreis</a>                | 53.30 €<br> |
|                        | ✗          | ✓           | <a href="#">Flexpreis Business</a> incl. | 65.20 €<br> |

## I. DB Partner Interface (PST) – Fares including reservation (2/2)

Administration The setting is done automatically and cannot be set administratively.

ID 14821

Additionally, for these fares, the booking with seat reservation is preselected, as it is included in the price. This ensures that a seat is always booked and the free reservation cannot be overlooked.

The screenshot displays the 'Train details' step of a booking process. At the top, a blue header bar contains a 'Rail' tab and a breadcrumb trail: 'Providers > Search train > Results > Train details > Confirmation'. Below this, a blue bar shows the date 'Thu, 11.12.2025' and time '01:39 h'. The main content area shows a train route from 'Stuttgart Hbf' (08:14) to 'Augsburg Hbf' (09:53). The train is identified as 'ICE 511 (DB Fernverkehr AG)' in '2nd class'. A 'Seat' button is visible. Below the route, a red box highlights the 'Flexpreis Business' fare type, with a note that it is 'non rebookable and cancelable without fees' and a link to 'further fare information'. At the bottom, the 'Seat Reservation' section shows three options: 'Ticket without seat reservation', 'Ticket with seat reservation' (which is pre-selected and highlighted with a red box), and 'Reservation without ticket'.

For fares that require a paid seat reservation, the reservation can still be manually selected by the traveller.

## II. DB Partner Interface (PST) – Display of train-specific information

**Administration** The setting is done automatically and cannot be set administratively.

ID 15046

We now display train-specific information for individual services. This includes expected occupancy, reservation details, onboard services, and information for travellers with disabilities.

The content is provided by Deutsche Bahn when querying the connection and may vary depending on the train type and route. Please note that this information is currently available in German only.

Important information

### III. Translation of station names for DB interfaces

Administration The setting is done automatically and cannot be set administratively.

ID 15574

When searching for routes abroad, it is often necessary for both DB interfaces to use the station name in the local language; otherwise, no results may be found.

With this release, we now translate the station name into the required language automatically.

The screenshot shows the onesto RAIL search interface. The 'Origin' field is set to 'Copenhagen' and the 'Destination' field is set to 'Stuttgart'. A dropdown menu is open under the 'Origin' field, displaying a list of railway stations in Copenhagen. The first option, 'KOEENHAVN', is highlighted with a red box. The other options are 'Koebenhavn H', 'Koebenhavn Syd', 'Koebenhavn H (togbus)', 'Koebenhavn Ishoej St.', 'Koebenhavn Kirkebjerg', 'Koebenhavn H (togbus)', and 'Koebenhavn Delta Park'.

| Station Name          |
|-----------------------|
| KOEENHAVN             |
| Koebenhavn H          |
| Koebenhavn Syd        |
| Koebenhavn H (togbus) |
| Koebenhavn Ishoej St. |
| Koebenhavn Kirkebjerg |
| Koebenhavn H (togbus) |
| Koebenhavn Delta Park |

## IV. UK Entry Information for Train Travel

**Administration** To use this function, please get in touch with your onesto contact.

ID 14377

With this enhancement, train travellers to the United Kingdom will now see entry requirement notices during the booking process. This allows travellers, like air travel, to be reminded of the need to complete the ETA procedure.

If this notice is already activated for flights, it will now automatically apply to train travel to the UK as well.

### Visa and immigration information for UK and Northern Ireland \*

Starting from April 2, 2025, travelers from European countries will require an Electronic Travel Authorization (ETA) to enter Great Britain and Northern Ireland.

- ☐ Applications can be submitted using the "UK ETA App" or via. <https://www.gov.uk/guidance/apply-for-an-electronic-travel-authorisation-eta>. Please note that travelers are responsible for checking the entry requirements and applying for a visa (if necessary) prior to their trip.

## I. India entry information

**Administration** The setting is done automatically and cannot be set administratively.

ID 16016

Since October 1, 2025, travellers from European countries will require an Electronic Travel Authorization (ETA) to enter India. Travelers must complete an online form up to 72 hours before entry, providing personal information, travel details, and stay information.

Applications can be submitted via ETA-IN e-Arrival.

For the booker, this information is displayed during the booking process and must be acknowledged before the booking can be completed.

### Visa and immigration information for India \*

Since 1 October 2025, travellers from European countries have required an Electronic Travel Authorisation (ETA) to enter India.

- ☐ Travellers must complete an electronic form containing personal details, travel details and stay information up to 72 hours prior to entry. Applications can be made via ETA-IN [e-Arrival](#).

Please note that travellers are responsible for checking entry requirements and applying for a visa (if necessary) before travelling.

## II. Updated US entry requirements

Administration The setting is done automatically and cannot be set administratively.

ID 16086

Due to updated entry requirements for the United States, it is now mandatory to provide a gender. Gender-neutral or non-binary entries may cause issues upon entry into the U.S.

The existing U.S. entry requirements notice in onesto has been updated to reflect this change.

### Entry requirement for the US \*

Upon entry into the United States, the designation "diverse" as a gender option is no longer permitted. Please therefore ensure that the appropriate selection has been made in your profile when making a booking.

☐ For actual entry and visa requirements please contact the appropriate government authority in the country of your citizenship. Travel to the U.S. may require an ESTA authorization.

More information can be found at <https://esta.cbp.dhs.gov>

## I. Hotel filter Apartment

Administration The setting is done automatically and cannot be set administratively.

ID 14846

For booking.com and ehotel, it is now possible to filter hotel search results by apartments, making it easier to find the right option, especially for longer stays.

## II. Hotel sustainability information (ehotel)

Administration The setting is done automatically and cannot be set administratively.

ID 11969

The provider ehotel now offers hotels with sustainability certifications.

To enable better comparison of hotels in terms of sustainability, these hotels are now marked with a green symbol.

The statistics “Booking Overview by booking date” and “Booking Overview by travel date” now display green hotels booked via ehôtel in the “Hotel Certification” column.

### III. Transfer of search input into an existing order (1/2)

**Administration** To use this function, please get in touch with your onesto contact.

ID 14967

If the “Check for Existing Orders/Trips” function is enabled in onesto, the search input from a new order is now automatically transferred when selecting an existing order.

If the system detects that travel data entered for a new order overlaps with an existing order, the familiar notification appears. When the existing order is opened, the search input is automatically applied to it.

The screenshot shows the onesto interface for a hotel search. On the left, there is a sidebar with a user profile icon, a booking reference field containing "01218862", a reason field, and a "No itinerary to display" message. The main area is a blue form titled "Hotel" with the following fields:

- Address:** "Munich, Germany" (highlighted in a red box)
- Radius (in km):** "5 Km" (highlighted in a red box)
- Arrival date:** "Tue, 21.10.2025" (highlighted in a red box)
- Departure date:** "Wed, 22.10.2025" (highlighted in a red box)
- Late arrival:** ☐ (highlighted in a red box)
- Room:** "01" and "Single room" (highlighted in a red box)
- Category:** A slider from 0 to 5 (highlighted in a red box)
- Hide prepaid rates:** ☐
- Remark:** A text input field

At the bottom, there is a "Note" section with a "Hello" message and a "Go to itinerary" button. On the right, there are buttons for "Travel Agency request" and "Search hotel".

### III. Transfer of search input into an existing order (2/2)

Remark

## IV. Synchronization of ehotel rebookings into the onesto order

**Administration** The setting is done automatically and cannot be set administratively.

ID 14908 

With this release, changes or cancellations of ehotel bookings made outside of onesto are now synchronized into the onesto order. This ensures that the current status is accurately reflected in the onesto travel itinerary as well as in all onesto reports.

## I. Display of company logo

Administration To use this function, please get in touch with your onesto contact.

ID 15120

With this release, you can now display corporate rates for car rental providers depending on the Company Discount Number, either with a company or travel agency logo or without a logo.

The screenshot shows the onesto car rental booking interface. The top navigation bar includes the onesto logo, support link, user profile (Hemmerich, Marc), and time (00:58:52). The sidebar on the left shows the user profile (Builder, Marlene), booking reference (OD1218764), and filters. The main search area displays the search criteria: Stuttgart, Echterdingen, Wed, 12.11.2025, 08:00 to Thu, 13.11.2025, 17:00. The search results show three car options:

| Car Type                                | Provider   | Price    | Logo   |
|-----------------------------------------|------------|----------|--------|
| HYUNDAI I10 (or similar car)            | Europcar   | 124.36 € | onesto |
| VW Polo (or similar car)                | Sixt       | 126.93 € | ✓      |
| TOYOTA AYGO OR SIMILAR (or similar car) | enterprise | 127.40 € |        |

## II. Order via travel agency

Administration The setting is done automatically and cannot be set administratively.

ID 14573

When using offline car rental bookings at the travel agency (e.g., for long-term rentals), the preferences from the traveller profile are now automatically applied to the booking form.

### III. Carpool – Pickup/return outside opening hours

Administration Zur Nutzung dieser Funktion wenden Sie sich bitte an Ihren onesto Ansprechpartner.

ID 14579

Within the onesto carpool management, each station offers the option to allow vehicle pickup and return outside regular opening hours.

This has now been separated, so that pickup and return can be configured independently. For example, pickups can be restricted to regular hours, while returns can still be made outside opening hours.

Allow pick up outside opening hours ☐

Allow return outside opening hours ☐

## I. Display of attachments from notification management in onesto2

**Administration** The setting is done automatically and cannot be set administratively.

ID 15642 

There is an update in the onesto2go app regarding the display of the travel overview.

Documents from notification management are now only displayed if the order was created after the rule was set up in notification management.

This applies to rules in the areas of email dispatch and destination-specific information, where documents can be attached.

## I. Advance notices

### **New onesto2go App for iOS and Android**

The new onesto2go app is being developed as a native app with a completely new and intuitive design for both iOS and Android. The app offers higher speed and a new user experience, powered by the new onesto API.

### **trainline**

UK Rail and SBB are already available via Trainline. Additional providers can be integrated upon request.

### **benerail**

Expansion to include PKP (Poland)

### **Kyte**

Kyte is a modern API aggregator offering airlines a standardized, flexible connection for distributing fares, ancillaries, and bundled offers based on NDC. onesto has already integrated Ryanair via Kyte and will continuously add more airlines and low-cost carriers.

### **Integration of Distribution Technologies**

Distribution Technologies is a global leader in ground transportation (bus, rail, ferry) technology, providing a platform for worldwide booking and distribution. onesto is working on integration with selected providers via Distribusion.

### **New onesto API**

The newly developed onesto API allows you to integrate products and services quickly, securely, and flexibly into your systems, enabling bookings and other processes to be executed simply and automatically..

### **onesto AI Smart Solutions**

Artificial Intelligence is not a trend, it's the future. onesto is actively exploring AI technologies, language models, and solutions to integrate "onesto smart solutions" across all products. These solutions provide users with new ways to optimize booking and billing processes, accelerate decisions, and be automatically supported by innovative features.
