## I. New onesto2go App (1/2)

**Administration** To use this function, please get in touch with your onesto contact.

ID 17234

We are pleased to announce that the first version of the **new onesto2go** app is available now for Apple iOS and Google Android in the respective app stores.

The **new onesto2go** app is a standalone application and does not replace the existing onesto2go app.

The existing app has been renamed **onesto2go classic** and will remain available during a transitional period. Both apps can continue to operate in parallel until further notice. Further development of onesto2go classic will be discontinued. The deactivation date for onesto2go classic will be communicated well in advance.

Important: Password changes for onesto2go classic can now only be made via the "Forgot Password" function within the app and are no longer possible through the onesto profile management system (Customer/Web).

Travel Managers can decide when and for which travellers the new onesto2go app will be introduced within their organization. The app can be enabled or disabled at any time for the entire system or for individual subsidiaries.

If you do not wish to use the new onesto2go app immediately, please contact your onesto Account Manager.

To support the rollout, we provide a dedicated onesto2go user guide for Travel Managers and travellers. Please contact your onesto Account Manager for further information.

The new onesto2go app includes all features currently available in onesto2go classic (with the exception of expense reporting) and offers a range of additional functionalities. The app will continue to be enhanced, with many new ideas already planned for future releases through regular updates.

Key highlights of the new app include:

Modern native App with significantly improved performance

Faster response times, greater stability, an enhanced user experience, and optimized performance powered by the newly developed onesto API.

Comprehensive Travel Itinerary Available Offline

All trips, booking details, tickets, invoices, and documents are organized chronologically and remain accessible within the app, even without an internet connection.

More flexible and convenient travel booking

Additional travel services can be added to existing trips at a later stage (for example, hotels, seat reservations, or rental cars). Different travel services can also be combined within a single booking session, eliminating the need to make separate bookings one after another.

## I. New onesto2go App (2/2)

Administration To use this function, please get in touch with your onesto contact.

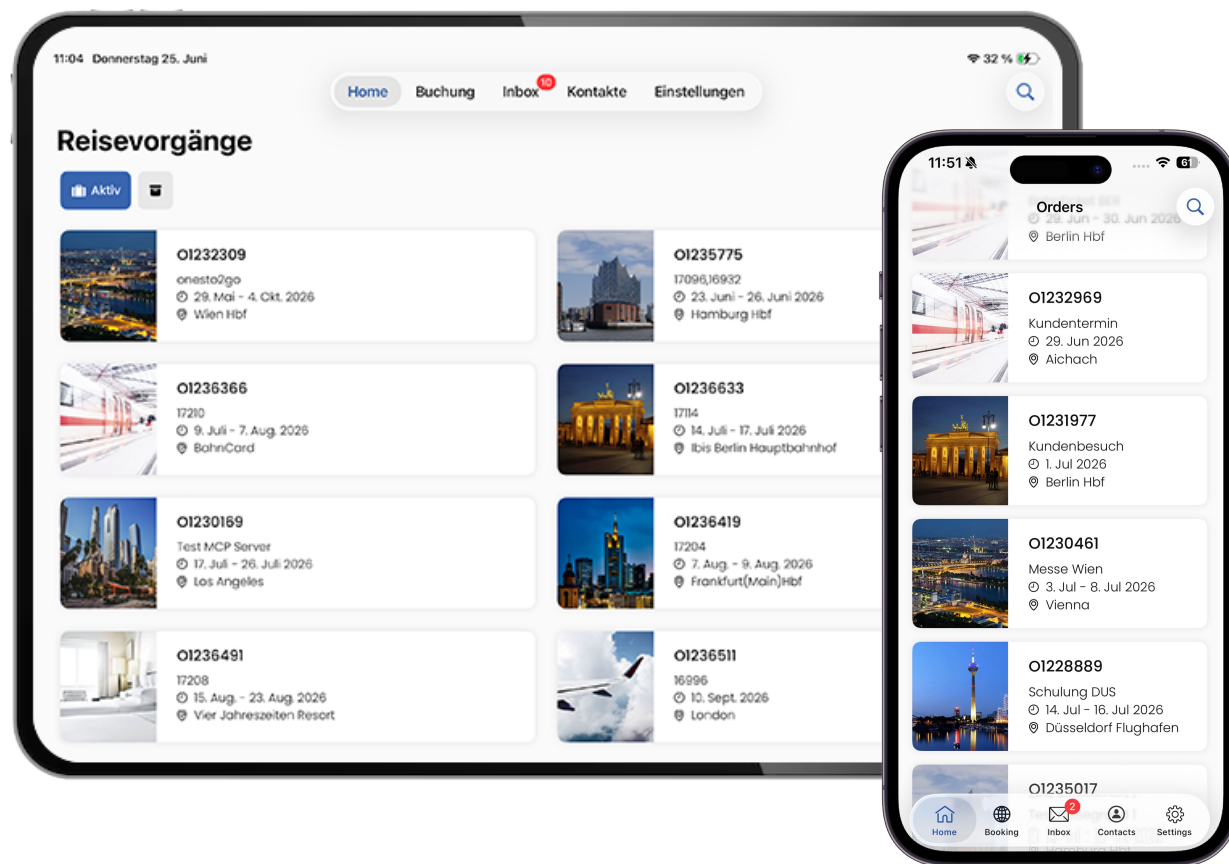

ID 17234

### Easier Sign-in and Modern Device Management

Sign in without a separate app password, including support for SSO and QR code login, as well as the management of registered devices via onesto Customer (Web).

### Greater Convenience for Everyday Business Travel

Benefit from a more intuitive travel management experience, including seat selection via interactive seat maps (for both air and rail travel), favorites for frequently visited destinations, an integrated message inbox, Dark Mode, and support for Android tablets and Apple iPads.

## II. onesto in MS Teams

Administration To use this function, please get in touch with your onesto contact.

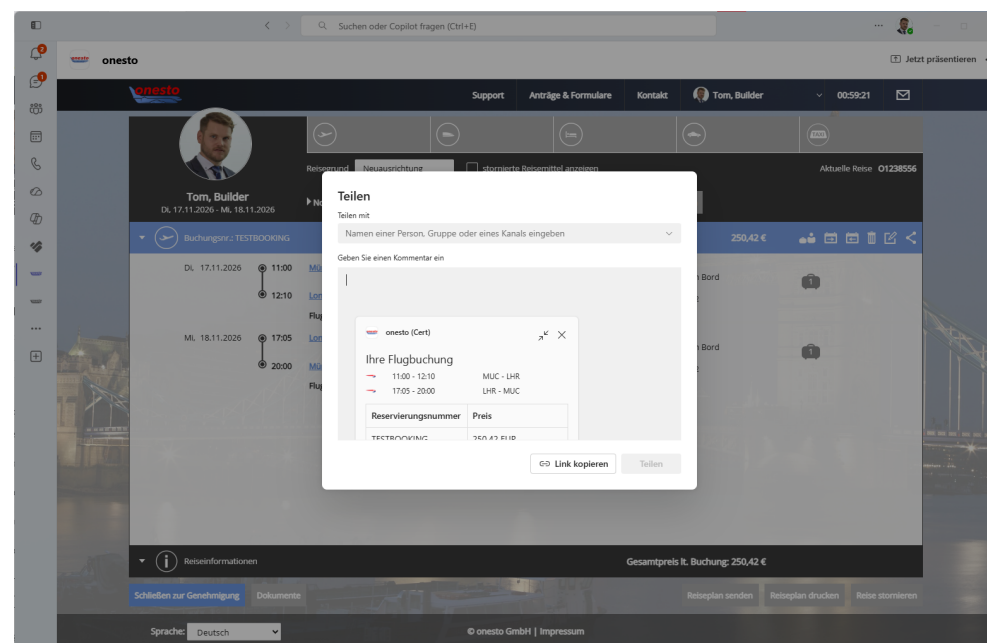

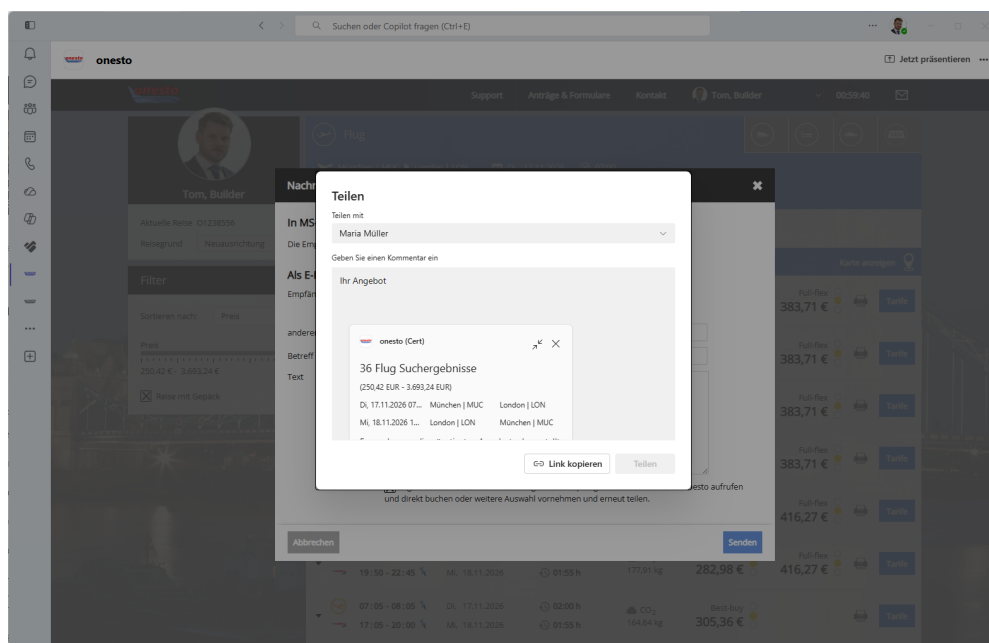

ID 17344

With the upcoming release, onesto will introduce the first phase of its Microsoft Teams integration. This includes the following features:

- Open onesto (Customer) directly within Microsoft Teams via a dedicated app using Single Sign-On (SSO)
- Share booked travel services from travel itineraries via Microsoft Teams chat messages
- Book travel services shared in Microsoft Teams chat messages into a new or existing trip in onesto
- Share complete or selected search results via Microsoft Teams chat messages
- Book travel services from shared search results into a new or existing trip

onesto will provide a dedicated app through the Microsoft Teams App Store. Users can sign in via Microsoft SSO. We are happy to support you with the implementation and setup of the app within your organization.

Microsoft's approval and publication of the onesto app in the Microsoft Teams App Store is expected to take place after the 08.2026 release. onesto will provide a separate announcement once the app becomes available and will also publish comprehensive instructions covering setup and usage.

### III. onesto smart cross-selling (1/2)

**Administration** To use this function, please get in touch with your onesto contact.

ID 15078 

The onesto smart solution "smart cross-selling" provides travellers with relevant additional travel service offers whenever a rail or flight booking exists.

In addition to hotels and rental cars, the solution can also suggest taxis and airport parking, tailored to the destination and travel dates of the existing booking.

Hotel recommendations are generated in combination with onesto smart recognizing, considering historical booking data of both the traveller and the organization.

The note "Last booked on" indicates that the traveller has previously stayed at the recommended hotel.

The types of travel services displayed through onesto smart cross-selling can be configured individually for each customer.

The transfer time between arrival at an airport or railway station and the next travel service (for example, a taxi or rental car) can also be customized.

The default transfer time is 30 minutes. Separate transfer times can be defined for air travel and rail travel.

### III. onesto smart cross-selling (2/2)

Administration To use this function, please get in touch with your onesto contact.

## IV. Vehicle licence plate stored in the profile for use with Park.Aero

**Administration** The setting is done automatically and cannot be set administratively.

ID 15405

When using Park.Aero, travellers can now store their vehicle registration number either in their profile or during the booking process.

This facilitates entry to and exit from airport car parks, provided that the parking facility supports automatic number plate recognition (ANPR).

## V. Control of messages and attachments across onesto Customer, Agent and onesto2go

**Administration** To use this function, please get in touch with your onesto contact.

ID 15682

New entries under "News" in the onesto message management system can be controlled according to the respective application. New messages can therefore be displayed selectively across all systems and user interfaces (Customer, Agent and onesto2go). A dropdown menu provides all available options.

For example, messages can be created that are displayed exclusively in onesto Customer or only within the onesto2go app.

Existing entries previously created under "News" remain unchanged. Entries under "Routing-related Messages", "Risk Destinations", and "Destination-specific Information" are not affected by this enhancement and continue to apply across all systems and user interfaces.

Attachments included in defined emails can now also be enabled or disabled for onesto2go. When the corresponding checkbox is activated, the uploaded file will be displayed in the "Documents" tab of the relevant trip in both the new onesto2go app and onesto2go classic.

onesto Release Note 2026.08

9

## VI. Dashboard enhanced with hotel and taxi CO<sub>2</sub> emissions

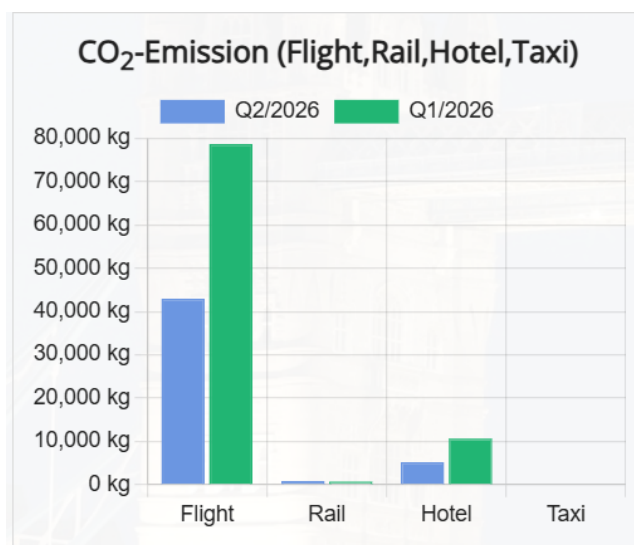

**Administration** To use this function, please get in touch with your onesto contact.

ID 16920

The CO<sub>2</sub> emissions reporting available in the onesto Travel Management Dashboard has been extended to include the additional columns "Hotel" and "Taxi".

As before, the data can be displayed for a selected company over a specific period or compared directly across two different periods.

This enhancement enables the analysis of total CO<sub>2</sub> emissions across air travel, rail travel, hotels, and taxis, providing a more comprehensive overview of an organization's travel-related environmental impact.

## VII. Travel Approval at Travel Policy Level

Administration To use this function, please get in touch with your onesto contact.

ID 14526

The requirement for travel approval can now be configured differently for individual employee groups at the Travel Policy level. This enhancement allows organizations to align approval workflows more precisely with their internal travel policies and requirements.

Wichtiger Kunde:

## VIII. Deletion of managers by travellers

**Administration** To use this function, please get in touch with your onesto contact.

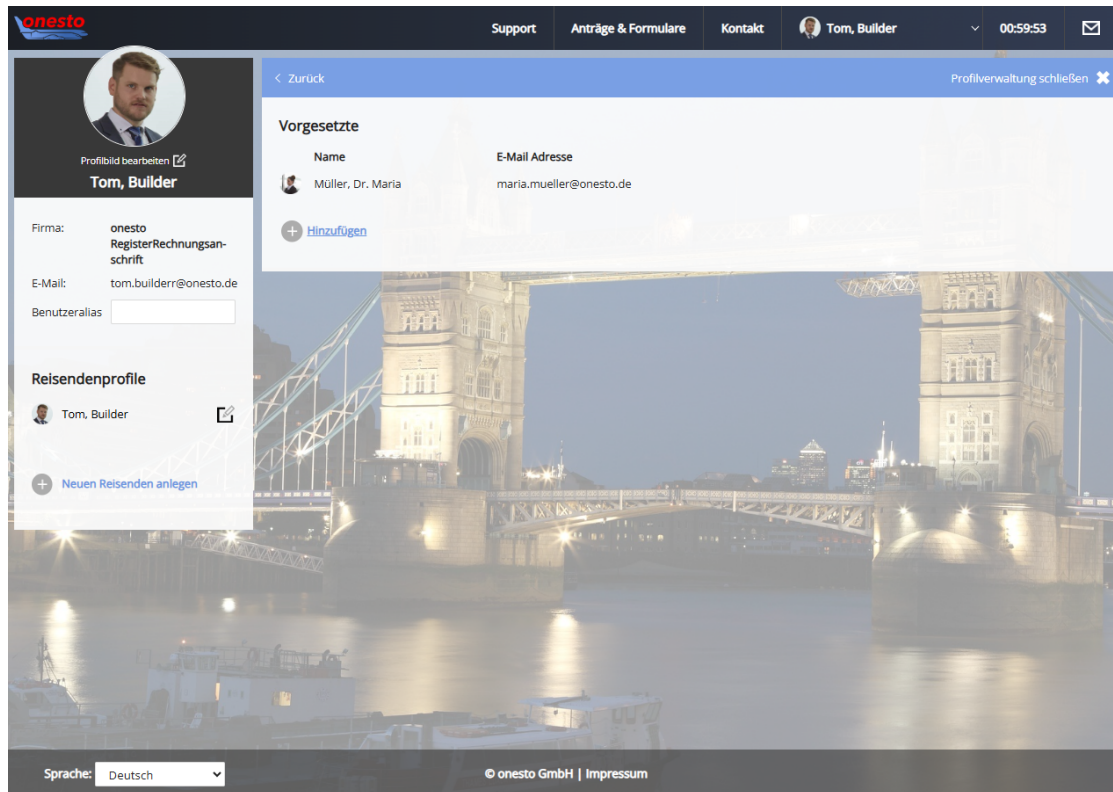

ID 16723

Managers can be added or removed either automatically through data transfers or manually within the traveller profile.

Where travellers are permitted to manage their own manager assignments, they may add or remove managers themselves.

With this enhancement, it is now possible to prevent travellers from deleting managers that have been assigned automatically via HR feeds or other system interfaces.

Travellers may continue to add and remove additional managers manually; however, managers assigned automatically through HR integrations or interfaces can no longer be removed manually by the traveller.

## IX. Standard reports enhanced with employee ID

**Administration** To use this function, please get in touch with your onesto contact.

ID 16522 

The standard reports for each travel service have been extended to include a new column: "Employee ID traveller".

By default, this field is not populated and is not displayed in the standard report output. However, it can be activated and used if required.

## I. DB Partner Interface (PST) – Mandatory age information for bookings

**Administration** The setting is done automatically and cannot be set administratively.

ID 16976

For bookings of many rail connections via the DB Partner Interface (PST), providing the traveller's age at the time of booking will now become mandatory. This is because many rail fares are age-dependent, and age information is also required for certain international fares.

There will be no change for customers who already allow travellers to enter and save their date of birth in their onesto profile as part of the rail booking process.

Builder, Marlene

Date of birth

BahnCard 1 of maximum 6 checked

☒ Use German D-Ticket

For customers who do not permit the storage of a date of birth during rail searches, the traveller's age will be requested during booking whenever this is required under the applicable fare rules.

### Travellers without a date of birth stored in their profile:

Builder, Marlene

Age

BahnCard 1 of maximum 6 checked

☒ Use German D-Ticket

If a traveller's date of birth is stored in their profile, the age field will not be displayed, and onesto will calculate the traveller's age automatically.

For bookings where neither Deutsche Bahn nor partner rail operators require age information, bookings can continue to be made without providing the traveller's age.

## I. Display of Lufthansa "Green Fares" (Farelogix)

Administration The setting is done automatically and cannot be set administratively.

ID 16758

When searching for Lufthansa flights via the Farelogix direct interface, Green Fares were not always displayed because they often have the same rebooking and cancellation conditions as standard fares while being offered at a higher price.

To ensure that these fares can be booked when desired, Lufthansa Green Fares are now displayed alongside other available fare options in the search results, provided they are available for the selected itinerary.

## II. Lufthansa Direct Interface NDC 24.1 | rebookings and refunds

Administration To use this function, please get in touch with your onesto contact.

ID 16725 

With our previous 2026.05 release, we announced the introduction of the new Lufthansa Direct Interface NDC 24.1. The certifications that were still pending with the Lufthansa Group at that time have now been completed, enabling the following initial enhancements:

- Online rebookings, including fare exchanges
- Cancellations

Further enhancements will be announced in upcoming release notes as soon as they become available.

### III. Display of rebooking fees and upsell fees in onesto Agent

Administration The setting is done automatically and cannot be set administratively.

ID 16076

We have enhanced the display within onesto Agent to provide travel consultants with direct visibility of rebooking fees and any additional fare payments resulting from a rebooking.

This ensures greater transparency during the rebooking process and enables travel agents to immediately view any applicable charges or fare differences.

## I. ehotel – Booking a double room for single occupancy

Administration The setting is done automatically and cannot be set administratively.

ID 16726

With this release, it is now possible to book double rooms for single occupancy not only through our partners HRS and Booking.com, but also via ehotel.

The screenshot displays the onesto ehotel interface. On the left, a sidebar shows the user profile 'Builder, Test' with a booking reference '01236570' and a 'Reason' field. The main area is titled 'Hotel' and contains search filters: Address 'Augsburg Hbf', Radius '4 Km', Arrival date 'Mon, 26.10.2026', and Departure date 'Tue, 27.10.2026'. A 'Room' dropdown is set to '01' and 'Single room'. A dropdown menu is open, showing options: 'Single room', 'Double room', and 'Double room for single use' (highlighted with a red border). A 'Category' slider is set to 4 stars. A 'Search hotel' button is at the bottom right. The background shows a hotel room with a bed and a mirror.

## I. Traffic Light Settings for Taxi/Limousine Services

**Administration** The setting is done automatically and cannot be set administratively.

ID 16088 

Within the travel policy (traffic light) settings for transfer service providers, it is now possible to define a maximum amount per kilometer for each traffic light category.

This enhancement provides even more granular control over travel policy compliance and allows organizations to manage approved taxi and limousine service costs with greater precision.

## I. Advance notices

### **New Travel Expense Management Partner Integration**

onesto is currently working on a new partnership and interface with an established provider of travel expense management solutions. Together, we will support travellers in the digital capture, submission, and processing of travel expenses.

### **Integration of Distribusion Technologies**

Distribusion Technologies is a leading global technology company in the ground transportation sector (bus, rail, and ferry), providing an innovative platform for worldwide distribution and booking services. onesto is currently working on the integration of selected providers via Distribusion.

### **New onesto API**

The newly developed onesto API enables you to integrate our products and services into your systems quickly, securely, and flexibly, allowing bookings and other processes to be executed easily and automatically.

### **onesto AI Smart Solutions & MCP Server**

Artificial Intelligence is not just a trend; it is the future. onesto is actively investing in AI technologies, language models, and related solutions to integrate onesto smart solutions across all products. These solutions will provide users with new opportunities to optimize booking and expense management processes, accelerate decision-making, and benefit from innovative features that offer intelligent and automated support wherever possible.

The onesto MCP Server (Model Context Protocol) serves as an intermediary layer for connecting AI language models (LLMs) and provides access to the corresponding functionality of the onesto API. The server is currently under development and is intended to become the central interface for model-based data exchange in the future.

### **Midoco Integration**

Midoco is a leading provider of mid-office and profile management software for the travel industry.

In the future, travel agencies will be able to send booking data directly from onesto to Midoco, enabling them to reduce or even eliminate passive PNRs, streamline processes, and potentially automate them entirely.

### **Dashboard Enhancements**

The existing Travel Management Dashboard will be further enhanced in terms of both functionality and visual design.

Planned improvements include optimized input filters, the addition of CO<sub>2</sub> data for further modes of transport, and the development of new export options.
